To use blocks, you will first need to create a Block Palette, which contains the blocks that you use the most. The Block Palette can be accessed from the palette menu as shown in the following figure: How to Create a Block Palette The Block Palette is a separate palette with four sections: Layer, Block, Block Reference, and Block Definition. Also, the PR values in women were almost the same as those in men, which is considered to be associated with the fact that most patients with PH are women. In addition, previous studies also showed that there was no gender difference in the histopathology of PAH and PH due to CHD \[\[@pone.0184346.ref009]--[\@pone.0184346.ref011]\]. Moreover, a previous study showed that the prevalence of PAH in patients with CHD was more frequent in women than in men \[\[@pone.0184346.ref012]\]. A gender-specific difference in the incidence of PAH in patients with CHD could be due to the fact that women are more likely to have increased hemodynamic shear stress due to increased heart size and atrial pressure than men \[\[@pone.0184346.ref012]\]. In this study, we also observed that the PR was significantly higher in patients with PAH than in those without PAH. Although PR is affected by diastolic filling pressure, the current results suggest that PR could be a novel predictor of PAH in patients with CHD, and that patients with high PR values are more likely to have PA
